Administrative rights on site system

Administrative rights on central administration site

Connection to SQL Server on central administration site

Check Server Service is running

Unsupported site server operating system version for Setup

Domain membership

Active Directory Domain Functional Level Check

Free disk space on site server

Pending system restart

Read-Only Domain Controller

Site Server FQDN Length

Windows Server 2003-based schannel hotfix

Microsoft Remote Differential Compression (RDC) library registered

Microsoft Windows Installer

Existing Configuration Manager server components on site server

Firewall exception for SQL Server

Firewall exception for SQL Server (stand-alone primary site)

SQL Server service running account

Dedicated SQL Server instance

SQL Index Create Memory option

Parent/child database collation

Minimum .NET Framework version for Configuration Manager site server

Required version of Microsoft .NET Framework

Recommended version of Microsoft .NET Framework

Windows Deployment Tools installed

User State Migration Tool (USMT) installed

Primary FQDN

Site code in use

Verify Central Administration Site Version

Required SQL Server Collation

SQL availability group configured for readable secondaries

SQL availability group configured for manual failover

SQL availability group replicas on default instance

SQL availability group replicas must be healthy

SQL availability group replicas must all have the same seeding mode

SQL Server Native Client version

Windows Server 2012 and 2012 R2 lifecycle

Unsupported operating system version for site system role

Backlogged inboxes

Check for incompatible collection references

Distribution point package version

SQL Server database collation

Share Name in Package

Software update points in NLB Configuration

Migration active source hierarchy

Unsupported upgrade path

Active Replica MP

Parent site replication status
Unsupported site system role 'Out of band service Point'
The System Health Validation Point site system role is no longer supported
Network Access Protection (NAP) is no longer supported
Verifying Database Consistency
Custom Client Agent Settings have NAP enabled
Default Client Agent Settings have NAP enabled
Software Update Point using a Load Balancer (NLB/HLB) is no longer supported
Upgrade Assessment Toolkit is unsupported
Cloud management gateway requires either token based authentication or a HTTPS management point
SQL Server Always On availability groups
Max Text Repl Size for SQL Server Always On availability groups
Pending configuration item policy updates
SQL Server Configuration for site upgrade
Potential SQL server performance issue caused by change tracking retention period
Check if the site uses hybrid mobile device management (MDM)
Check if the site uses Upgrade Readiness (UR) cloud service connector
Check if the site uses Microsoft Operations Management Suite (OMS) Connector
Enable HTTPS or Enhanced HTTP in site properties
Application catalog roles are unsupported
Check if the site uses the Asset Intelligence sync point role
Check for site system roles associated with deprecated or removed features
Resource Access policies are no longer supported
Check for a cloud management gateway (CMG) as a cloud service (classic)
SQL Server sysadmin rights
SQL Server sysadmin rights for reference site
Site server computer account administrative rights
Unsupported site server operating system version for Setup
Domain membership
Pending system restart
SQL Server version
SQL Server supported version
SQL Server Edition
SQL Server Tcp Port
Case-insensitive collation on SQL Server
Required version of Microsoft .NET Framework
Recommended version of Microsoft .NET Framework
Validate FQDN of SQL Server Computer
Primary FQDN
SQL Server 2012 lifecycle
Windows Preinstallation Environment installed
SMS Provider machine has same domain as site server
SMS Provider machine has same domain as site server;   Passed
